74HC/HCT161

Presetable synchronous 4-bit
binary counter; asynchronous reset

Product specification
File under Integrated Circuits, IC06

December 1990

Presettable synchronous 4-bit binary counter; asynchronous reset

74HC/HCT161

FEATURES

- Synchronous counting and loading
- Two count enable inputs for n-bit cascading
- Positive-edge triggered clock
- Asynchronous reset
- Output capability: standard
- I_{CC} category: MSI

GENERAL DESCRIPTION

The 74HC/HCT161 are high-speed Si-gate CMOS devices and are pin compatible with low power Schottky TTL (LSTTL). They are specified in compliance with JEDEC standard no. 7A.

The 74HC/HCT161 are synchronous presettable binary counters which feature an internal look-ahead carry and can be used for high-speed counting. Synchronous operation is provided by having all flip-flops clocked simultaneously on the positive-going edge of the clock (CP).

The outputs (Q₀ to Q₃) of the counters may be preset to a HIGH or LOW level. A LOW level at the parallel enable

input (\overline{PE}) disables the counting action and causes the data at the data inputs (D₀ to D₃) to be loaded into the counter on the positive-going edge of the clock (providing that the set-up and hold time requirements for \overline{PE} are met). Preset takes place regardless of the levels at count enable inputs (CEP and CET).

A LOW level at the master reset input (\overline{MR}) sets all four outputs of the flip-flops (Q₀ to Q₃) to LOW level regardless of the levels at CP, \overline{PE} , CET and CEP inputs (thus providing an asynchronous clear function).

The look-ahead carry simplifies serial cascading of the counters. Both count enable inputs (CEP and CET) must be HIGH to count. The CET input is fed forward to enable the terminal count output (TC). The TC output thus enabled will produce a HIGH output pulse of a duration approximately equal to a HIGH level output of Q₀. This pulse can be used to enable the next cascaded stage.

The maximum clock frequency for the cascaded counters is determined by the CP to TC propagation delay and CEP to CP set-up time, according to the following formula:

$$f_{\max} = \frac{1}{t_{P(\max)} (\text{CP to TC}) + t_{\text{SU}} (\text{CEP to CP})}$$

QUICK REFERENCE DATA

GND = 0 V; T_{amb} = 25 °C; t_r = t_f = 6 ns

SYMBOL	PARAMETER	CONDITIONS	TYPICAL		UNIT
			HC	HCT	
t _{PHL} / t _{PLH}	propagation delay	C _L = 15 pF; V _{CC} = 5 V			
	CP to Q _n		19	20	ns
	CP to TC		21	24	ns
	\overline{MR} to Q _n		20	25	ns
	\overline{MR} to TC		20	26	ns
	CET to TC		10	14	ns
f _{max}	maximum clock frequency		44	45	MHz
C _I	input capacitance		3.5	3.5	pF
C _{PD}	power dissipation capacitance per package	notes 1 and 2	33	35	pF

Notes

1. C_{PD} is used to determine the dynamic power dissipation (P_D in μW):

$$P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_o)$$

where:

f_i = input frequency in MHz

f_o = output frequency in MHz

∑ (C_L × V_{CC}² × f_o) = sum of outputs

C_L = output load capacitance in pF

V_{CC} = supply voltage in V

2. For HC the condition is

$$V_i = \text{GND to } V_{CC}$$

For HCT the condition is

$$V_i = \text{GND to } V_{CC} - 1.5 \text{ V}$$

Presettable synchronous 4-bit binary counter; asynchronous reset

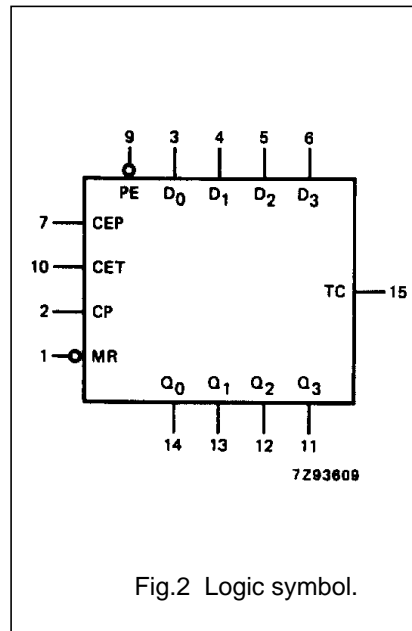

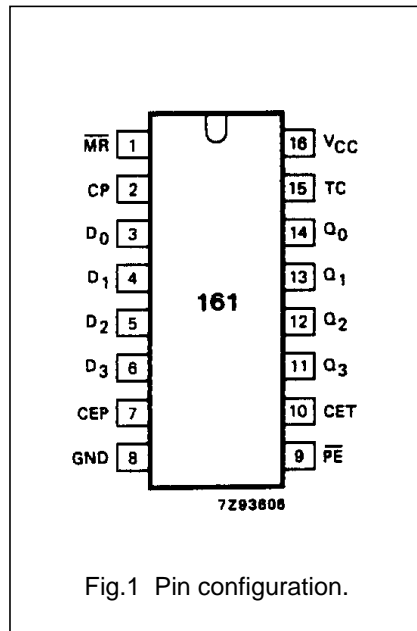

74HC/HCT161

ORDERING INFORMATION

See "74HC/HCT/HCU/HCMOS Logic Package Information".

PIN DESCRIPTION

PIN NO.	SYMBOL	NAME AND FUNCTION
1	\overline{MR}	asynchronous master reset (active LOW)
2	CP	clock input (LOW-to-HIGH, edge-triggered)
3, 4, 5, 6	D ₀ to D ₃	data inputs
7	CEP	count enable input
8	GND	ground (0 V)
9	\overline{PE}	parallel enable input (active LOW)
10	CET	count enable carry input
14, 13, 12, 11	Q ₀ to Q ₃	flip-flop outputs
15	TC	terminal count output
16	V _{CC}	positive supply voltage

DC CHARACTERISTICS FOR 74HCT

For the DC characteristics see *"74HC/HCT/HCU/HCMOS Logic Family Specifications"*.

Output capability: standard

I_{CC} category: MSI

Note to HCT types

The value of additional quiescent supply current (ΔI_{CC}) for a unit load of 1 is given in the family specifications. To determine ΔI_{CC} per input, multiply this value by the unit load coefficient shown in the table below.

INPUT	UNIT LOAD COEFFICIENT
\overline{MR}	0.95
CP	1.10
CEP	0.25
D _n	0.25
CET	0.75
\overline{PE}	0.30
